

## Waste Sorting at Home

- Separate recyclables (plastic, glass, paper) from general waste.
- Set up designated bins for each waste type to make sorting easier.
- Educate your family on proper waste segregation for a cleaner environment.

## Preparing Waste for Recycling

- Rinse and clean recyclables to avoid contamination.
- Remove lids and caps from bottles before recycling.
- Flatten cardboard boxes to save space and facilitate recycling.

## Decoding Recycling Labels

- Look for recycling symbols on packaging.
- Identify the type of material (e.g., PET, HDPE).
- Check if it's recyclable in your area or needs special handling.

## Composting Organic Waste

- Start a compost bin for kitchen scraps and garden waste.
- Layer green (fruit peels) and brown (leaves) waste for optimal composting.
- Use compost to enrich your garden and reduce landfill waste.

## Promoting Recycling with Neighbours

- Collaborate with neighbours to set up recycling stations in public spaces.
- Organise community clean-up drives to maintain public areas.
- Spread awareness about the importance of recycling in the community.

## Supporting Local Waste-Reclaimers

- Respect waste-pickers as vital contributors to the recycling ecosystem.
- Collaborate with local organisations to support waste-pickers' welfare.
- Donate recyclables directly to waste-pickers to empower their livelihood.

LET'S TAKE SMALL STEPS TOGETHER TO MAKE A BIG DIFFERENCE IN CREATING A  
GREENER, CLEANER, AND MORE SUSTAINABLE ENVIRONMENT!
